PCplansMGA application - new version available.

PCplansMGA application – new version available

PCplansMGA is an application developed by Land Services SA that enables licensed surveyors and plan drafters to check survey plan data captured in PCplans against the Map Grid of Australia (MGA) coordinates obtained from the Surveyor-General's Survey Mark coordinate database.

A new version of PCplansMGA (4.11.2021) that uses the comma separated variable (csv) table generated from the survey mark search in the South Australian Integrated Land Information System ([SAILIS](#)) and the survey marks selected in the South Australian Property & Planning Atlas ([SAPPA](#)) is available for download from the [Electronic Plan Lodgement page](#) of the Land Services SA website.

If you have any queries relating to the PCplans application or the csv files please contact AGD.SurveyOperations@sa.gov.au
